

Create Tasting:

Templates: Make the various templates match the information in the examples.

“Choose Type” - I imagine the main purpose of this is to help parse data in the database; Lets just make it a drop down menu.

I am realizing we need to have two modes for this section; “study mode” and “competition mode”.

Study Mode: Mainly used for studying / non-formal tasting where people will be tasting as they go and don't need to have a “creator” or “moderator” enter all the item information beforehand. If they were creating their own tasting they could however still enter the categories and parameters. This is an important difference because if you are running a competition you would need to enter all the item information before starting the tasting, but if you are just a group of people who are studying / tasting together Study Mode will allow for a quicker setup.

Competition Mode: Used for more formal tastings or competitions where item information must be preloaded before starting the tasting.

Rank Participants: If this is selected (only available in competition mode) the participants will be ranked according to their accuracy.

Creat Tasting

1. Select mode: Study Mode, Competition Mode (short description of each)
2. Number of items (or could just add 1 by 1 as you go with an “add item”button.
3. Item name
4. Categories (Maybe limit to 10 categories?) : Add category button
5. Category Name: Example (Variety, State, Region)
6. Category Parameter: You should be able to set the parameter for each category separately; EX: you could have 1 category as subjective input, one as multiple choice and one a sliding scale. The options should be: Exact Answer, Subjective input, Contains X, Multiple Choice (will need to be able to enter the options for multiple choice questions, Sliding Scale (1-100) (this should have option to rank). In the “Contains X” option we need to account for spelling mistakes or variations (so it wouldn't need to exactly match the word but perhaps contain most of the characters.)
7. Enter data: Need to be able to enter the correct data for each item in competition mode before starting the tasting.
