

Quick Tasting: A preset tasting format made for quick tasting on the fly. This would be primarily for single user tastings. Item name, nose, mouth, other, overall score (1-100). Add item.

Allow for quick tasting with templates - People could quick taste with the templates but without the option to pre-add item information, no blind option, no ranking / multiple choice / etc. - only subjective input or options that are part of the template itself.

Change the "What are you tasting" section to a drop down menu

Remove the number of samples section - just have an "add item" button so people can add as they go.

- No need for "Quick Tasting Ready" page

- No need for "start tasting now" or "Create Another"

- No need for photo of "sample 1 / item" - unless we could make it so the user could take a photo of each item - that would be great.

- Since we removed the "number of samples section" - the user can name each item as they add it. Example: Item 1: Cabernet Napa Item 2: Cabernet France etc.

- Quick Tasting Parameters:

- Aroma

- Flavor (change from Palate),

- Other (change from Finish) in prompt description put "Any other important information?"

- Overall (make a slide button with 0-100 range)

- add item, or end tasting button at bottom of form.
